

Practical Spill Management

Introduction

Spill response is essential in ensuring protection of your site and the environment from pollution incidents. This Spill Management course provides your staff with sufficient knowledge about spill response, enabling you to plan for and respond to incidents in your own organisation.

Course Duration

SSG offer this course over a half day as a private course.

Course Attendees

This course is suitable for anyone with responsibilities for spill management planning and practical spill response.

Course Programme

- Why is spill control important?
- Key legislation
- Pollution pathways
- Pollution prevention
- Emergency response procedures, including a practical session

Training Certification and Assessment

Delegates will be assessed on their input during the practical exercise and their feedback. SSG course attendance certificates will be issued following successful completion of the course; these are valid for three years.

Suggested Follow on and Complementary Courses

- Train the Trainer Spill Management
- CoSHH Assessment Workshop
- NEBOSH Environmental Awareness at Work Qualification
