

Asbestos Awareness (UKATA) e-learning

SSG is a UKATA-registered member

Introduction

Asbestos is one of the biggest occupational health issues and kills around 5000 workers each year, which is more than those who die through road traffic accidents in the UK. However, asbestos is not just a problem of the past. It can be present today in any building built or refurbished before the year 2000.

Asbestos training should be provided to employees whose work could foreseeably expose them to asbestos. This course will teach delegates to work safely with asbestos and ensure theirs and their colleagues' safety.

Note

This course does not train you to work with Asbestos-Containing Materials (ACMs).

Course Duration

SSG offer this as an e-learning course, which will take approximately two hours to complete. Delegates will be able to check their progress throughout the course using the e-learning checks at the end of each part of the course.

Delegates will be given a three month licence upon first access, in which to complete the course. Once this licence expires, delegates will be required to pay a fee to reactivate it and must contact our Customer Service Team for more information.

UKATA believes Asbestos training can be delivered through a combination of face-to-face and e-learning provision.

Course Attendees

It is a mandatory training requirement under Regulation 10 of the Control Asbestos Regulations for all those who are exposed to, are liable to be exposed to asbestos or those who supervise or manage such employees.

This could include but is not limited to carpenters, plumbers, heating and ventilation engineers, maintenance workers, cable installers (phone, computer, alarms), shop fitters, demolition operatives, construction workers, painters and decorators, architects or surveyors.

Course Programme

- History, types and properties of asbestos
- Possible effects on health
- Overview of relevant legislation to include the Control of Asbestos Regulations 2012
- Locations / identification of possible Asbestos-Containing Materials (ACMs)
- Operations that could cause fibre release

- Asbestos surveys
- Procedures upon discovery

Training Certification and Assessment

Delegates will be assessed by a multiple-choice assessment which requires an 80% pass mark. Certification will be provided on successful completion of the training and is valid for one year. UKATA requires those with this certificate to attend annual refresher training.

ID cards can be requested at an additional cost of £7.50 per delegate.

Suggested Follow on and Complementary Courses

- Asbestos Awareness Refresher
- Asbestos Non-Licensed Operative
- CITB Site Management Safety Training Scheme
- CITB Site Supervision Safety Training Scheme
